~~Strike me~~

This is a long sentence designed to wrap across multiple lines  
to test the max\_width wrapping feature. The algorithm  
implementing this functionality is clearly explained in the  
comments within the pdfgen.py file. A background has also been  
added for visual emphasis. However, both the background and the  
underline currently extend slightly beyond the end of each  
line. This can be adjusted by making a few modifications in the  
generator file.
